

The Jacobs Institute Newsletter

A Dose of Medical Innovation

Issue: #12

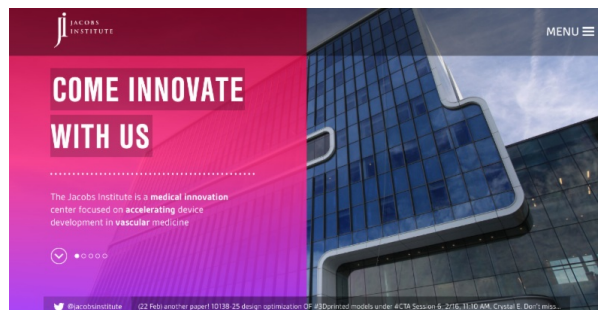

March 2017

Where to find the latest developments emerging at the Jacobs Institute in Buffalo, New York.

NEW JACOBS INSTITUTE WEB SITE LAUNCHED

Redesigned To Reflect Our Innovative Spirit

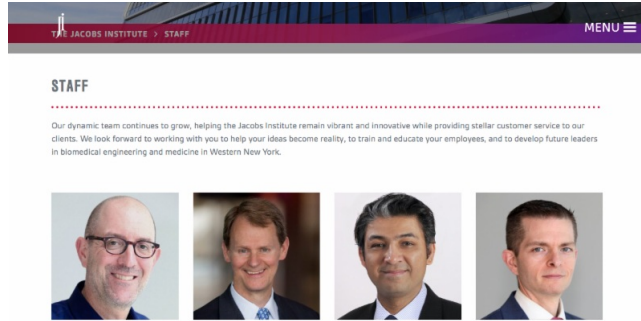

The Jacobs Institute (JI) proudly launched a new web site today-jacobsinstitute.org. The new site aligns the latest web technology with a beautiful design that echoes the JI work space and laboratories. User-friendly interface makes it easy for the site's visitors to access key information, such as the clinical experts with which the Institute works, its programs for the vascular medical device industry, its educational outreach activities, and its soon-to-be-unveiled Idea to Reality Center (i2R).

The site was developed by Block Club to encapsulate the JI's innovative

spirit. It showcases the JI's unique design and its strategic commitment to bringing together physicians, scientists, engineers, entrepreneurs, and industry to attack problems that no individual can solve on their own, while inspiring the next generation of Buffalo's leaders in science, medicine, and engineering.

Jl's new site will be critical to launching the i2R, a proof of concept center to rapidly develop vascular medical devices, which will open later in 2017. Entrepreneurs with an idea for a novel endovascular device can learn more about the JI's process on the site and stay tuned for more information once the i2R is open for business.

Please visit our new site today! www.jacobsinstitute.org

The Jacobs Institute mission is to accelerate the development of next-generation technologies in vascular medicine through collisions of physicians, engineers, entrepreneurs, and industry.

Our vision is to improve the treatment of vascular disease in Western New York and the world, while fostering local economic development, and honoring the memory of Lawrence D. Jacobs, MD.

Located in the heart of the Buffalo Niagara Medical Campus (BNMC) in downtown Buffalo, the Jacobs Institute is positioned between University at Buffalo's Clinical and Translational Research Center (CTRC) and Kaleida Health's Gates Vascular Institute (GVI).

The JI is uniquely positioned to foster collaboration of our key partners. We have the right people in the right place at the right time.

Come innovate with us.

Please visit [the JI web site](http://theJIweb.com)

Sincerely, The Jacobs Institute
